EDUCATION

NEW YORK UNIVERSITY, Tandon School of Engineering

Master of Science, Urban Data Science (GPA 3.9 / 4.0)

New York, NY

May 2027

Relevant Coursework: Applied Data Science, Machine Learning for Cities, Big Data Management & Analysis, Geographic Information Systems

HANYANG UNIVERSITY, School of Architecture

Bachelor of Architecture (Graduated Summa Cum Laude)

Seoul, South Korea

TECHNICAL SKILLS

- **Data Analytics & ML** | Python (Pandas, GeoPandas, NumPy, scikit-learn, SciPy, PyTorch), SQL, ArcGIS
- **Data Management** | Oracle, MongoDB, Apache Spark
- **Visualization & BI** | Python (Matplotlib, Plotly, Pydeck), Tableau, Power BI, Excel

PROFESSIONAL EXPERIENCE

NEW YORK UNIVERSITY

Planning Intern, Strategic Assessment, Planning & Design

New York, NY

Oct 2025 – Present

- Built end-to-end pipeline from data warehouse to Tableau internal server, streamlining spatial-data analysis for campus planning.
- Developed dashboards aggregating disparate datasets, bridging spatial and financial metrics to drive capital-project decisions.
- Analyzed building-meter energy data with Python models to evaluate utilization and surface inefficiencies across NYU campus.

COUPANG

Designer, Space Design & Innovation – Logistics Launch Team

Seoul, South Korea

Jun 2023 – Jun 2025

- Engineered spatial capacity models for 400+ last-mile nodes, optimizing throughput and extending customer order cut-off by 4 hours.
- Scaled service coverage 200% via geospatial feasibility analysis on 200+ candidate locations, driving strategic site selection.
- Revamped facility layouts at 8 critical sites to resolve capacity shortages, generating \$75,000 in annual cost savings.

GANSAM ARCHITECTS & PARTNERS

Architect

Seoul, South Korea

Jan 2020 – Jun 2023

- Led architectural design of a Smart Logistics Center from concept through construction documents, coordinating MEP and fire-safety teams.

SELECTED PROJECTS

Cool Roofs: Targeting NYC Urban Heat Investment (Applied Data Science)

May 2026

- Built PCA + K-Means pipeline classifying 40,013 Manhattan buildings into roof-typology clusters from RGB orthoimagery and PLUTO data.
- Designed \$24M cool-roof optimization model selecting ~3,370 buildings, reducing modeled mean surface temperature by 0.78°C.

Energy Burden Prediction Model (Machine Learning for Cities)

May 2026

- Trained Random Forest on 2,200+ NYC census tracts to predict residential energy burden, integrating PLUTO, canopy, transit, and ACS features.
- Tuned hyperparameters via RandomizedSearchCV (5-fold CV); ablation showed urban-form features add measurable lift over socio-only baseline.

Convertshare: Office-to-Residential Conversion Tool

Apr 2026

- Built feasibility tool targeting 90M sq ft of vacant Manhattan office space, with a financial model covering acquisition, construction, and design costs.

GIS Portfolio: Blank Street Coffee NYC site-selection market analysis (arcg.is/1iuiifT0) · 19th-Century New York historical map (arcg.is/1r0TWq1)

CERTIFICATES & AWARDS

- **1st Prize**, 2026 ConTech Alliance Hackathon · Apr 2026
- **Registered Architect**, Korean Institute of Registered Architects (KIRA) · Jun 2025
